

GAVIN

Thank you for your purchase of Gavin Cycling Shoes!

Important cleat installation instructions

Only use the screws provided by the pedal/cleat manufacturer. Before installing any screws, we recommend greasing the threads in the sole. Position the cleat in line with the ball of your foot.

Do not over tighten cleats, as you could strip the holes. Check screw heads for wear, re-grease the threads when switching, and replace screws when worn.

Tightening torque for cleat screws is **5-6 Nm** (3.7-4.4 foot lbs.).

To properly care for shoes, clean dirt off with a damp rag and use a soft brush for stubborn mud. Air dry at room temperature. Stuff paper inside shoes to help absorb moisture and keep their shape. Never use a washing machine or dryer to clean/dry shoes. Do not dry near any heat source including a radiator or fire.
